-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

## **DETAILED ACTION**

### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Drawings***

2. Figures 6-8 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Specification***

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Claim Rejections - 35 USC § 102***

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by

Matsuda et al., (Matsuda), US 2002/0167626.

Art Unit: 2871

5. Matsuda discloses (page 3, paragraph 0061 – page 4, paragraph 0075) and shows in Fig. 2, a display device comprising:

- an IC (applicant's driving unit) for driving a liquid crystal (page 3, paragraph 0061);
- a first transparent substrate ((102) (applicant's first member) and a second transparent substrate (101) (applicant's second member) disposed in opposition to each other with the liquid crystal (110) interposed therebetween, the first member having a display area, the second member having a display corresponding area corresponding to the display area of the first member and a non-display corresponding area which is different from the display corresponding area (page 3, paragraph 0061);

- a lamp (16) (applicant's source of light) disposed within the non-display corresponding area of the second member; and
- a light guide (9) (applicant's guide member) disposed at a side of the second member opposite the first member for guiding light from the source of light.

Accordingly, claims 1, 3, 5 and 6 are anticipated.

As to claims 2 and 4 it is clear from Fig. 2 of Matsuda that the guide member (9)

Art Unit: 2871

protrudes from the display corresponding area of the second member (101) in a direction toward the non-display corresponding area thereof and that the driving unit (IC) is disposed at a side of the second member near the first member.

As to claim 7, it is also clear from Fig. 2 of Matsuda that the display area of the first member is rectangular, and the display corresponding area and the non-display corresponding area of the second member are disposed in a side-by-side relation with each other in a direction orthogonal to the longitudinal direction of the display area of the first member.

***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2871

**8. Claims 8-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsuda as applied to claims 1-7 above.**

9. As to claim 8, typically an image forming apparatus comprises an image forming unit for forming an image on a recording material and a display device for displaying information related to the image forming unit. Further, since the display device of Matsuda enhances the brightness of the display screen (page 1, paragraph 0002) and using such a display device in an image forming apparatus is considered as intended use, it would have been obvious to one of ordinary skill in the art to obtain an image forming apparatus having such a display device incorporated therein for advantages such as enhanced brightness.

As to claims 9-14, see the discussion above regarding claims 2-7.

### ***Conclusion***

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
